

Innov8tive Designs: Scorpion's Distribution Partner

In the rapidly changing field of electric powered RC models, you need a partner that can be counted on to provide the latest technological advancements: A company that possesses a thorough understanding of the product's application and use, that will also back the products in a professional manner, with the highest level of integrity. Originally founded in 2006, Innov8tive Designs was created to provide both import and distribution services to the RC Hobby Industry, with the primary focus on customer service. With over 30 years of RC hobby experience, plus 15 years of RC product manufacturing experience as the owner of LDM Industries Inc., Innov8tive Designs' founder, Lucien Miller, possesses a wealth of both professional and practical knowledge. In the growing field of RC electric power systems, Lucien's engineering background is exceptionally useful, and provides Innov8tive Designs with a level of technical expertise that is not commonly found in other distribution companies. With two degrees in Electrical Engineering, plus extensive experience in both aeronautical and mechanical design, he is more than qualified to recommend and provide technical support for electric power systems and RC hobby related products.

Lucien originally became aware of the Scorpion Precision Industry company in early 2006 through a Beta test program for the company's 35 amp speed controllers. During the development of the new speed controllers, he also became aware of several high quality brushless motors that were also being developed. Lucien was so impressed with these products that he contacted the owner of the Scorpion to discuss import and distribution opportunities. After several months of discussions, Innov8tive Designs was granted the exclusive distribution rights in the United States for the entire Scorpion product line. Innov8tive Designs now proudly represent the Scorpion products as their distribution partner.

At Innov8tive Designs, we treat our customers with respect, and provide a personal level of customer service that is second to none. We are much more than just the distributor of Scorpion's products; we are a partner in the growth and development of new product lines, and work with Scorpion to help meet the customers' needs. Recent additions to Scorpion product line include the new 22mm HK-Series motors for helicopters and other high Kv applications, and 40mm S-Series motors for larger .60 to 1.20 size electric models and glow conversions. There are also several other product lines currently under development that are scheduled for release throughout the coming year. These include a new line of 6-cell speed controllers with built-in switching BEC circuits, and larger 55mm and 65mm brushless motors with matching 12-cell and 15-cell speed controllers. We are very excited about other Scorpion products, currently in development, that will completely revolutionize electric power systems. Scorpion is committed to producing the finest brushless motors and speed controllers available today, and through their partnership with Innov8tive Designs, making these products available to hobby dealers, kit manufacturers and modelers all across the United States.

You don't have to take our word for it, just take a look at what some of our customers are saying about their Scorpion Products.

"I just wanted to write and say what an incredible motor the Scorpion HK-2221-8 is! It flies like a dream and is barely warm after hovering for 7 minutes. The ESC is great to, and incredibly failsafe for a "newbie" like myself! Both of them look just killer in my TREX 450SE V2, and I am the envy of the field!"

"I flew my new Scorpion powered Extra 300 today and it looks like I may have found a new motor line to stick with. To say performance is great would be an understatement. I have been flying this Scorpion 3026-10 for one week / 45 flights now and I am truly impressed. It never goes over 115°F (windings) according to my rather expensive Raytech IR gun, and it still feels like brand new. I have had some similar priced motors develop bearing problems with less usage."

"I go out and fly every Friday at a club - There were more airplanes with Scorpion motors than pilots today. We're turning into a "Scorpion Club" and really putting a lot of time on various sizes of motors. It's good to see the products being put through the paces week after week."

"Today in the mail I got my Scorpion motor. I unpacked it and almost passed out. It's packaged like a Rolex watch! I've got to post pictures of the packaging. First the shrink wrap, then a beautiful cardboard sleeve, next a tin box inside the sleeve with a hinge and more beautiful painting. Inside a clear plastic lid over the motor. Next, a foam interior cut out to hold all the pieces. Mind boggling. I haven't seen anything like this in years. You have to buy one of these just to see the packaging!"

To complete our total customer service package, Innov8tive Designs also provides full warranty services for all of Scorpion's products. To compliment the 2-year warranty provided by Scorpion, that covers defects in materials and workmanship, Innov8tive Designs offers a 2-year Crash-Protection policy. During the warranty period, if your Scorpion Motor or Speed Controller is ever damaged beyond repair, simply return it to Innov8tive Designs, and you can purchase a replacement product for 50% of the current retail price, plus a small shipping fee. When you combine the exceptionally high quality products that Scorpion Precision Industry produces, with the distribution expertise and superior customer service provided by Innov8tive Designs, you have a winning team that works together to provide you the finest electric power systems available.

Scorpion Brushless Motors and Speed Controllers are exclusively distributed in the United States by:
